Assignment 2

Ashish Jangid

Area of Triangle

Abstract—This document contains the sketching of the loci using equations.

1 Problem

Solve: Problem set: Vector2, Example-4,4

By taking a number of solutions, sketch the loci of the following equation

$$x^2 - 4x + y^2 + 3 = 0 ag{1.0.1}$$

2 Solution

The general equation is given as,

$$\mathbf{x}^{\mathsf{T}}\mathbf{V}\mathbf{x} + 2\mathbf{u}^{\mathsf{T}}\mathbf{x} + f = 0 \tag{2.0.1}$$

Comparing (1.0.1) and (2.0.1) we get,

$$\mathbf{V} = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}, \mathbf{u} = \begin{pmatrix} -2 \\ 0 \end{pmatrix}, f = 3 \tag{2.0.2}$$

The center of circle is given as **c** and can be obtained from,

$$\mathbf{c} = -\mathbf{V}^{-1}\mathbf{u} \tag{2.0.3}$$

The inverse of V(which is an identity matrix here) is identity itself,

$$\mathbf{V}^{-1} = \mathbf{V} = \mathbf{I} \tag{2.0.4}$$

Putting the values of (2.0.2) and (2.0.4) in (2.0.3) we get,

$$\mathbf{c} = -\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} \begin{pmatrix} -2 \\ 0 \end{pmatrix} \tag{2.0.5}$$

$$\mathbf{c} = \begin{pmatrix} 2 \\ 0 \end{pmatrix} \tag{2.0.6}$$

Now we'll calculate the radius of the circle:

$$\mathbf{r} = \sqrt{\mathbf{u}^{\mathsf{T}}\mathbf{u} - f} \tag{2.0.7}$$

$$\mathbf{u}^{\mathsf{T}}\mathbf{u} = ||\mathbf{u}||^2 \tag{2.0.8}$$

$$= 2^2 = 4 \tag{2.0.9}$$

Putting the value of (2.0.8) in (2.0.4) we get,

$$\mathbf{r} = \sqrt{4 - 3}$$
 (2.0.10)

$$= 1 \text{ unit}$$
 (2.0.11)
